Text A

English as a World Language in Academic Writing (Extract)

INTRODUCTION

Para. 1 It is widely accepted that English has become the language of choice for many international scholarly journals. The trend is on a rise, and academia is left with almost no choice but to publish in English in order to obtain international recognition. In this respect, academic English, for the majority, means both an opportunity and a threat. The international community may get the chance to get to know the author and his or her work well. If not, the researcher and his or her work are, in a sense, deprived of this opportunity (Bakopoulos, 1997). For Crystal (1997), conversation without a common language between academicians from different nationalities, both in the virtual and real world, would prove impossible.

Para. 2 In the modern world, English has become the language of not only science but also aviation, computing, diplomacy, and tourism. It is listed as the official or co-official language of over 42 countries and is spoken extensively in other countries where it has no official status. English plays a part in the cultural, political, or economic life of the following countries (Graddol, 1997):

Lesson 1

Reading

Table 1 English plays a part in the cultural, political or economical life of the following countries

Antigua and Barbuda	Irish Republic	St Vincent and
Australia	Jamaica	Grenadines
Bahamas	Liberia	Singapore
Barbados	Malaysia	South Africa
Belize	Montserrat	Suriname
Bermuda	Namibia	Trinidad and Tobago
Brunei	New Zealand	United Kingdom
Canada	Nigeria	(England, Scotland,
Cayman Island	Papua New Guinea	N. Ireland, Wales)
Gibraltar	Philippines	United States of
Grenada	Puerto Rico	America
Guam	Sierra Leone	Virgin Island (Br)
Guyana	St Kitts and Nevis	Virgin Island (US)
India	St Lucia	Zimbabwe

Lesson 1

Reading

Para. 3 This compares to 27 for French, 20 for Spanish and 17 for Arabic. This domination is unique in history. We could argue that English is on its way to becoming the world's unofficial international language. Despite the fact that Mandarin (Chinese) is spoken by far more people as a first language, English is now the most widespread of all the world's languages.

Para. 4 It may be an exaggeration to argue that humans are on the way to a pre-Babylonian state, yet most feel the need for a *lingua franca*. English seems to be the language most available to meet this need, which has become rather obvious following WWII. The foundation date of the United Nations, which serves as the “chief international forum”, is 1945. This union badly needed a *lingua franca*. The Secretariat thus decided to use English and French, the two working languages, as its means of communication between partners. Had it not done so, there would have been an urgent need for multi-way translation-interpretation facilities, which would have been rather costly and inconvenient. Graddol (1997) identified three types of speakers using English: those who speak it as a first language (around 375 million speakers), those who speak it as second or additional language (again, some 375 million speakers), and those who learn it as a foreign language (about 750 million learners). Graddol (1997) also identified the major domains of English as:

Lesson 1

Reading

1. Working language of international organizations and conferences
2. Scientific publications
3. International banking economic affairs and trade
4. Advertising for global brands
5. Audio-visual cultural products such as film, TV, popular music
6. International tourism
7. Tertiary (university) education
8. International safety (airline and maritime travels)
9. International law
10. As a “relay language” in interpretation and translation
11. Technology transfer
12. Internet communication

Lesson 1

Reading

Para. 5 Translation problems from other languages into English cause serious problems for people doing business. For example, a recent doctoral study in international law in the United States concluded that the French language protection measures are in conflict with the principle of a common market with the free movement of goods, services, labor, and capital. Such conflict, it is believed, could soon lead corporate lawyers to challenge national language legislation and demand an English-only market throughout the EU (Phillipson, 2001).

Para. 6 Although scholars attribute the spread of English to Britain's and the USA's economic and military power in the 19th and 20th centuries, these two factors are not enough to account for this spread. For example, with a population of 1.6 billion people, India will be the world's most populous country by 2050. Hindi, the official language of India, was promoted as a common language by the British in this country. Despite this fact, English somehow managed to remain the official second language. No doubt, mid 19th-century reforms played a key role in enabling English to be promulgated as the language of administration. India became independent from Britain in 1947, and the English language was supposed to be phased out by 1965. However, today English and Hindi are the official languages; educated Indians nowadays speak and write in English fluently, and it is spreading faster in India than in any other country (Fennell, 2001).

Lesson 1

Reading

Para. 7 Unlike the Americans and British, who simply allow the spread of English to take its course, the French have spent billions on promoting their language in French-speaking territories in Africa and the Pacific. Pushed by the Académie Française, the French government has imposed sanctions on officials or agencies financed by taxes that are found using Americanisms or English phrases where a French equivalent exists (Johnson, 2004). A recent and striking example is Turkmenistan: Niyazov (Former President of Turkmenistan) pursued strong nationalistic policies to encourage the use of the Turkmen language over Russian and banned access to Russian-language media, leading to an increased exodus of some of the country's most educated citizens and the decimation of its school system ("Turkmenistan's Authoritarian President, " 2006).

Lesson 1 Review — Paraphrasing

Paraphrasing is the reformulation of a sentence by using different sentence structures or expressions. It is a report in your own words of what someone else has said in a source text.

Lesson 1 Review — Paraphrasing

Paraphrase the topic sentences of Para. 1 in Text A and then compare the adapted version with the original one to reinforce some of the key features of academic English.

It is widely accepted that English has become the language of choice for many international scholarly journals. The trend is on a rise, and academia is left with almost no choice but to publish in English in order to obtain international recognition.

Lesson 1 Review — Paraphrasing

Answers for reference:

More and more people want to become famous in the world. They choose to write in English when publishing articles.

It is widely accepted that English has become the language of choice for many international scholarly journals. The trend is on a rise, and academia is left with almost no choice but to publish in English in order to obtain international recognition.

Lesson 1 Review — Paraphrasing

Answers for reference:

More and more people want to become famous in the world. They choose to write in English when publishing articles.

1. passive voice / impersonal structures;
2. academic vs. general vocabulary ;
3. nominalization;
4. hedging;
5. adjective or adverbial modifiers;
6. coherent & cohesive devices.

It is widely accepted that English has become the language of choice for many international scholarly journals. The trend is on a rise, and academia is left with almost no choice but to publish in English in order to obtain international recognition.

Lesson 1 Comprehension Check

I. Reading for main ideas

Read the text and complete the following abstract with TEN of the words given. You may NOT use any of the words in the bank more than once.

- | | | | |
|-----------------|--------------|-----------------|---------------|
| A) concludes | B) entails | C) historical | D) inherent |
| E) observations | F) outline | G) overwhelming | H) phenomenon |
| I) proceed | J) process | K) prominent | L) recognized |
| M) reference | N) supremacy | O) various | |

Lesson 1 Comprehension Check

- | | | | |
|-----------------|--------------|-----------------|---------------|
| A) concludes | B) entails | C) historical | D) inherent |
| E) observations | F) outline | G) overwhelming | H) phenomenon |
| I) proceed | J) process | K) prominent | L) recognized |
| M) reference | N) supremacy | O) various | |

ABSTRACT

Language is a 1 H which can hardly be viewed separate from its very 2 D component, culture. This component does by all means play a significant role in enabling the language to gain a global status. No doubt, some 3 K issues do contribute to this process: political, economic, and military 4 N, to name but a few. This study aims to shed light on the issue regarding the use of English as a first, second or foreign language around the world with a specific 5 M to academic writing. We will first 6 F the present situation of English as an international language, and discuss the use of it across the world by global organizations and various nations. We will then present a historical background of English as a ‘lingua franca’, or as some scholars call it, English as an International Language (EIL). We will 7 I with a brief history of milestones paving the way

Lesson 1

Comprehension Check

- | | | | |
|-----------------|--------------|-----------------|---------------|
| A) concludes | B) entails | C) historical | D) inherent |
| E) observations | F) outline | G) overwhelming | H) phenomenon |
| I) proceed | J) process | K) prominent | L) recognized |
| M) reference | N) supremacy | O) various | |

for this language in gaining its international status as a world language in academic writing. Despite the fact that this language is a truly 8 L world language in most scientific fields, the trend in most nations is more toward preserving their linguistic identity. This study 9 A with the caveat that although the overwhelming hegemony of English causes pessimism in most nations, our observations reveal that these nations are well aware of the fact that scientific recognition in the international arena 10 B the use of English in academic writing.

Lesson 1 Comprehension Check

II. Reading for evidence

Scan the text and match the languages in the left column to its corresponding descriptions in the column next to it.

- | | | |
|---|------------------|---|
| B | 1. Hindi | A) an ideal substitute if there were no working languages in the UN |
| C | 2. English | B) will be enjoying the most speakers as a first language by 2050 |
| A | 3. lingua franca | C) official second language in India |
| I | 4. Mandarin | D) the use of it results in the brain drain |
| E | 5. French | E) a major competitor for English |
| H | 6. Arabic | F) official or co-official language of almost half of the countries for English |
| F | 7. Spanish | G) forbidden in Turkmenistan's media |
| G | 8. Russian | H) people in 17 countries use it as the official or co-official language |
| D | 9. Turkmen | I) a language with the most native speakers |

Lesson 1 Micro-skills

I. Supporting claims with evidences

II. Coherence

Lesson 1 Supporting claims with evidences

A. The following extracts (a-c) all make similar claims. In which extract does the writer:

1. give an example or some data to support the claim? c
2. assume that the claim is common knowledge, so no supporting evidence is needed? a
3. support the claim by referring to a published work where the same or similar claim has been made? b c

- a It is widely accepted that English has become the language of choice for many international scholarly journals.
- b For Crystal (1997), conversation without a common language between academicians from different nationalities, both in the virtual and real world, would prove impossible.
- c English plays a part in the cultural, political, or economic life of the following countries (Graddol, 1997): ...

Lesson 1 Supporting claims with evidences

B. Match the pieces of evidence (1-5) to the claims (a-e) they support and then decide what type of evidence they are.

claim	supporting evidence
a. Peer-learning offers the context for students to learn from each other and, in this sense, is essential to foreign language learning.	1. In terms of group learning, I changed from original reluctance to present enthusiastic participation in discussions and I can now articulate freely my thoughts and ideas.
b. Group lessons can reduce the stress of the learning environment, especially in the universities with expansion of enrollment.	2. For example, Northeastern University had some of its classrooms furnished for group sessions, with desks arranged around smart screen projectors.
c. Quite a number of universities have adopted the design of smart classrooms which facilitates group learning.	3. “A common scenario in universities is that they lack the capacity to provide enough individualized studying space for all students. Group learning, in this sense, serves as a viable alternative.” (Wayne, 2019)

Lesson 1 Supporting claims with evidences

B. Match the pieces of evidence (1-5) to the claims (a-e) they support and then decide what type of evidence they are.

d. Students, especially the introverted ones, can be pulled out of their comfort zone and develop their communicative capacity.	4. In the academic year of 2020, up to 85 percent of the innovation contest programs involve multiple participants as compared to only 15 percent single ones
e. Students become inspired and therefore more productive in their lab work and innovative designs.	5. Studies suggest that, in class environment, language students learn mostly from their peers rather than from teachers (Raymond, 2001).

a-5 b-3 c-2 d-1 e-4

A quotation 3 An example 2 Statistics 4
 Research findings 5 Personal experience 1

Lesson 1 Coherence

Coherence refers to the overall understandability of what is written or said. A discourse is coherent if it sequences information or ideas in a logical way. It is one of the criteria of excellent writing.

Cohesion means the connection of ideas at the language level, while coherence means the connection of ideas at the logic level. Effective use of cohesive devices usually contributes to good coherence; inappropriate use of cohesive devices may make a text cohesive but incoherent. See the following four examples.

Lesson 1 Coherence

A. Lily got many gifts today. Some friends had remembered the birthday.

B. Lily got many gifts today. Her friends had remembered her birthday.

C. Lily got many gifts today. Therefore, her palms were sweaty.

D. Lily's performance was about to start. Her palms were sweaty.

Lesson 1 Coherence

A sounds understandable, but it is not as good as **B**, which uses a reference word “her” to make the sentence more cohesive and coherent. **C** does not make sense because the two sentences are not logically connected at all, even though there are cohesive devices (reference word “her” and conjunction “therefore”). **D** is cohesive with the use of reference word “her”, and it is also coherent with the underlying logic even though no conjunction is used between the two sentences.

Lesson 1 Coherence

Basic kinds of logical sequence include time order, spatial order, order of procedure, order of importance, exemplification, causal relation, problem and solution, compare and contrast, etc. In narrative writing, time order is used to tell a story. In descriptive writing, spatial order is used to describe a scene or a place. In expository writing, order of procedure, classification, and compare and contrast are often employed. In argumentative writing, order of importance, exemplification, causal relation, problem and solution, and other kinds of logical sequence may be used to explore an issue.

Lesson 1 Coherence

Unity is a factor leading to coherence. **Paragraph unity** refers to the development of a paragraph around a topic sentence with no irrelevant information being included. **Essay unity** refers to an essay having a well-balanced organization and being developed around a thesis statement with all body paragraphs supporting it.

Lesson 1 Coherence

A. Decide what basic kind of logical sequence is used in each of the following statement.

1. Existing gender gaps in digital inclusion, if not properly addressed, are likely to lead to gender inequalities in many other areas, including inequalities in labor markets and less financial inclusion of women. The main reason behind this is that digital technologies are omnipresent and digitization affects all areas of our lives.

causal relation

2. A popular use case for NLP is analyzing tweets or reviewing sites for feedback on products. For example, a marketing department for an electronics company might launch a campaign for its new reasonably priced portable chargers.

exemplification

Lesson 1 Coherence

A. Decide what basic kind of logical sequence is used in each of the following statement.

3. The SAT became widespread as a screening instrument after the Educational Testing Service (ETS) was founded in 1948. With increased demand for college education, the 1980s and 1990s witnessed a telescoping on standardized test scores as a criterion for admission to selective institutions, rendering the SAT a prominent measure of merit by default. In 2006, 94 percent of four-year colleges and universities considered SAT scores in their admission decisions.

time order

4. After signing a consent form that made it clear that they were free to withdraw from the study at any point, participants were instructed by the booklet to complete the stress-arousal check list, which measured both state negative incidental affect (stress) and arousal.

order of procedure

Lesson 1 Coherence

A. Decide what basic kind of logical sequence is used in each of the following statement.

5. For the 90-minute classes, at time point three, flying disc sports had the most time (45%, 41 minutes) spent in MVPA, while Tai Chi had the least at time point one with zero minutes of MVPA.

contrast

6. Two versions of the booklet had been created: in one the GM apple was said to have been modified to help prevent dental decay (health benefit), in the other the modification was supposed to have the effect of delaying the onset of rotting in the apple (money-saving benefit).

classification

Lesson 1 Coherence

A. Decide what basic kind of logical sequence is used in each of the following statement.

7. Like mobile phone access did for voice, mobile broadband is spearheading internet adoption. Across Africa, Asia and Latin America, people are accessing the internet for the first time through their mobile devices. However, as of 2015, it was estimated that 200 million fewer women — some 14% globally — than men owned mobile phones. The adoption of mobile technologies alone can play a substantial role in shortening the gender divide by making women “feel safer and more connected, and provide access to information, services and life-enhancing opportunities like health information, financial services and employment opportunities”.

comparison and contrast; problem and solution

Lesson 1 Coherence

B. Below are sentences in disorder from a paragraph. Reorder them for coherence by numbering the sentences from 2 to 9. Analyze how coherence has been achieved in this paragraph.

___1___ During the session, four short texts were handed out to students, and the same steps followed for each text.

___9___ Immediately after the session, I wrote down my impressions of the investigation, giving special attention to the discussion.

___8___ This recording was later transcribed using the conventions which I had established earlier in the pilot study.

___7___ The whole process was recorded using a video camera with an external microphone, which I had set up in the classroom prior to the beginning of the session.

___4___ In this demonstration I spoke aloud my thought processes while working through the same task.

Lesson 1 Coherence

B. Below are sentences in disorder from a paragraph. Reorder them for coherence by numbering the sentences from 2 to 9. Analyze how coherence has been achieved in this paragraph.

3 This group stage was followed by a demonstration to the students of how I inferred meanings.

5 After this, students again worked in groups to discuss the clues that I had used.

2 First of all, students worked in small groups, trying to guess the meanings of any unknown words in the text.

6 This was followed by a whole-class discussion of the strategies that I had used.

9—8—7—4—3—5—2—6

Lesson 1 Macro-skills

Referencing

Lesson 1 Referencing

The basic principle of **referencing** is to support and identify the evidence you use in your assignments. You direct readers of your work to the source of evidence. This can be done by presenting (or citing) either the name of the source, or an identification number, in the main text of your work. The full source detail is given later, either in a footnote / endnote, and / or in an alphabetical list at the end of the assignment.

Lesson 1 Referencing

A. Discuss with a partner the reasons why there is so much emphasis on reference.

1. Facilitating the tracing of the origin of ideas;
2. Helping you to build a web of ideas;
3. Supporting your own voice in academic writing;
4. Validating arguments;
5. Helping to spread knowledge;
6. Acknowledging the work of others;
7. Demonstrating the scope of your reading and its influences on your work;
8. Serving as the marking criteria;
9. Avoiding plagiarism;
10. ...

Lesson 1 Referencing styles

All **referencing styles** are built on the same idea of citing a source in the text of an assignment, either with a name or a number. The most commonly adopted styles worldwide are:

- **Author-date (Harvard) style** designed to use with all subjects
- **APA style** psychology, education, and other social sciences
- **MLA style** language, literature, arts, and humanities
- **Chicago (Turabian) style** designed to use with all subjects
- **CBE / CSE style** physical, and mathematical sciences; life sciences and medicine; engineering disciplines

* Ask your tutor(s) / librarian(s) or affiliated institution / department what conventions of your academic discipline you should follow consistently. If they have no preference, you can use any or follow the above guidelines.

Lesson 1 Referencing styles

B. Look at the following advice on referencing systems. Fill in the gaps by choosing the appropriate word in the brackets.

In the author-date (or Harvard) system, in-text references can be either integral or non-integral to the sentence. In a / an 1 integral (integral / non-integral) reference, the 2 surname (first name / surname) of the author is used as an element of the sentence, often as the 3 subject (object / subject) of the sentence. It is followed by the date of 4 publication (publication / subscription) in brackets. For example:

Graddol (1997) identified three types of speakers using English: ...

Lesson 1 Referencing styles

In a / an 5 non-integral (integral / non-integral) reference, the last name of the author and the date of publication are put in 6 brackets (brackets / semi-colons) at the end of the sentence. For example:

English plays a part in the cultural, political, or economic life of the following countries (Graddol, 1997): ...

Integral references focus more attention on the author. In a non-integral reference, you can list a number of sources by different authors. For example:

... women pay more compliments than men (Herbert, 1990; Holmes, 1988, 1998; Johnson & Roen, 1992) ...

In this example 7 four (three / four) sources are given: one written by Herbert, one by Johnson and Roen, and two by Holmes. Items in the list are separated by 8 semi-colons (colons / semi-colons) and usually given in 9 alphabetical (alphabetical / numerical) order (He-, Ho-, J-).

Lesson 1 Referencing styles

When a publication has more than two authors, only the surname of the first author is given, followed by a comma and the words 10 et al. (etc. / et al.). For example:

... while men in analogous situations do not (Johnstone, et al. 1992)

All the sources mentioned in a text are listed alphabetically (using the surname of the author) in a reference list at the end. For example:

References

Fennell, B. (2001). *A history of English: A sociolinguistic approach*. Oxford and Malden, MA: Blackwell

Graddol, D. (1997). *The future of English*. London: The British Council.

Lesson 1 Referencing styles

Another method of referencing is often called the numeric or footnote system, associated predominantly with Chicago style. For example:

Both service and manufacturing firms experience similar problems in managing the introduction of IT¹ ...

A number is placed in the text, usually in 11 superscript (subscript / superscript) or sometimes in square brackets, which links to a source at the bottom of the same page. These sources are listed in 12 numerical (alphabetical / numerical) order.

① Research shows that in the written academic corpus 71% of references are integral and 29% are non-integral.

Lesson 1

Referencing styles

C. APA Style

It is a writing style and format for academic documents such as scholarly journal articles and books. It is commonly used for citing sources within the field of behavioral and social sciences. It is described in the style guide of the American Psychological Association (**APA**).

The way to acknowledge sources accurately is to put the details in the full **reference** at the end of your essay. An article on a newspaper's website is shown below.

* Note that the punctuation is very important.

Lesson 1

Referencing styles

Lesson 1

Referencing styles

1. Use the first item in the REFERENCES section in Text A as an example for APA style referencing, and familiarize yourself with all the key elements in great detail.

Bakopoulos, D. (1997, January 28). English as universal academic language: good or bad? *The University Record*. Retrieved December 15, 2006, from http://www.umich.edu/-urecord/9697/Jan28_97/artc118.htm

Lesson 1

Referencing styles

2. Look at the reference list from a student essay. What type (1-10) is each source (A-J) in the list?

1. book with one or more author(s)
2. edited book
3. publication without a named author
4. article in a journal
5. paper in an edited book
6. article in a magazine or newspaper
7. unpublished dissertation
8. article in a journal; originally printed, but found online
9. article in an online reference source
10. information or statistics from a government or other organization online

Lesson 2

Lead-in

Pre-reading questions

Academic English is the genre of English used in the world of research, study, teaching and universities. If you read an article in an academic journal or listen to someone giving a presentation or a talk about an academic subject in an academic environment, academic English is probably being used. If you are studying in an English-speaking university (or going to study), you will need to learn this type of English. Native English speakers also have to learn academic English too because it is not like the English that is used every day by English speakers.

Lesson 2

Lead-in

Pre-reading questions

Academic English is different from other types of English and it often has features like these:

- it uses formal academic language and avoids colloquialisms;
- it usually avoids “I” and is written in the third person and often uses impersonal structures;
- it is objective and impartial;
- it often uses the passive voice;
- it is tentative and cautious;
- there are lots of references to other writers;
- the texts are well structured;
- there are well developed paragraphs which often start with a strong topic sentence;
- there are linking words which give the text cohesion.

Lesson 2

Lead-in

Based on what you have learned in the previous units, try to answer the following questions.

1. What is an abstract?

A short piece of writing, usually prior to the introduction part of an essay, summarizing the main ideas of the whole piece.

2. What might a typical introduction include?

Attention getter, background information, academic context, thesis statement, organization / outline, definitions, rational...

3. Can you name some of the key components of the conclusion section?

Summary, restatement of the stance, significance, implication, suggestions for future research...

Lesson 2

Lead-in

Based on what you have learned in the previous units, try to answer the following questions.

4. Is REFERENCES section necessary for all academic writings?

In most settings, definitely yes. As long as a societal value system vigorously supports the idea of the intellectual property rights of others, referencing has to be seen.

5. What function do footnotes perform?

An additional, more detailed note placed at the bottom of the page in an essay, manuscript or book, explaining the terms, proper names or commenting on or citing a reference for a designated part of the text.

Text B

Publishing in English or another language: An inclusive study of scholar's language publication preferences in the natural, social and interdisciplinary sciences

Daniel Stockemer • Michael J. Wigginton

©Akadémiai Kiadó, Budapest, Hungary 2019

Abstract

To what extent has English become the dominant language of scientific communication? What factors push non-native speakers to publish their research in English rather than their native language? Using a survey of more than 800 authors of scientific papers in Springer Nature journals we find that the average non-anglophone researcher makes approximately 60% of their journal submissions in English. This percentage varies across disciplines, regions, and age groups, with younger scholars, Europeans, and those in the natural sciences favouring English more heavily. Finally, we find that the belief that publishing in English will increase the reputation of one's work is a primary motivator; in contrast, perceived institutional pressures to publish in English do not seem to influence researchers' language choice.

Keywords Scientific communication • Academic publishing • Multilingual scholars • Language of science • English as an international language

Lesson 2

Reading

Para. 1 While as recently as the mid twentieth century academic publishing and teaching in languages other than English was commonplace, the dominance of US and UK universities has made English the dominant language of international scholarship (Altbach 2007). This dominance of English as the common language of scientific communication has triggered some academic interest (see: Uzuner 2008). For example, several scholars highlight how the difficulty of mastering English and the preference for the writing styles of native speakers limit the ability of non-native speakers of English to produce or consume academic literature (Benfield and Howard 2000; Braine 2002; Flowerdew 2001, 2008, 2012; Flowerdew and Li 2009). Others raise concerns regarding the possibility that the use of English privileges western social networks and cultural norms, and thus further limits the participation of scholars from developing nations (Canagarajah 1996, 1999; Curry and Lillis 2010). A third group of studies has a slightly different focus and investigates the motivations of scholars to write in English rather than in their native language; in this type of research, there seems to be consensus that the prestige and international recognition of English-language journals is the primary motivation for non-native speakers to write their papers in English instead of their local language (Cho 2004; Curry and Lillis 2004; Duszak and Lewkowicz 2008; Lee and Lee 2013; López-Navarro et al. 2015; Rocher and Stockemer 2017) Finally, many studies highlight that in countries such as the Netherlands, Belgium and Turkey national policies have favored English by pushing publications in international journals as a requirement for funding and promotion (Işık-taş 2018; Uysal 2014).

Lesson 2

Reading

Para. 2 While much has been written of the effects of English's dominance, the extent to which scholars favour English and the factors that lead them to do so has seen very little large scale quantitative study; the literature lacks an analysis of the actual extent to which English dominates academic publishing. What percentage of their journal articles do non-native speakers write in English? Is there variation in scholars' tendencies to publish in English across disciplines, age groups, and motivational factors? This short research note tries to answer these questions. To do so, we use a survey of 856 non-native English-speaking researchers publishing in Springer journals in all disciplines that was undertaken to better understand researchers' habits in publishing and reading research. The survey, which was distributed to authors who published in Springer journals in either English or their native language, was available in six languages: English, Portuguese, Japanese, Korean, Chinese, and German. The survey was in the field from early October to late November 2016. Respondents were asked both closed- and open-ended questions about types of journals they publish in, the language(s) they choose to adopt when writing and publishing their research, and their reasons for doing so. Roughly half of the respondents answered the survey in English.

Para. 3 Figure 1 confirms that English is the common language of science or the most-used language of the scientific publication. Yet, its dominance in article-submissions is far from complete, at least when it comes to the results of our survey. On average, respondents estimate that 59.5% of their recent journal submissions are written in English, and only 16% report submitting exclusively in English. With a standard deviation of 29.5 the data are quite widely spread. For example, roughly 20% of respondents estimate that they wrote a quarter or fewer of their recent submissions in English.

Lesson 2

Reading

Para. 4 To explain the variation in scholars' tendency to publish in English, we perform bivariate tests on six possible explanatory variables: age, perceived reputation of English as the language of science, perceived institutional pressure to publish in English, place of employment, area of study (i.e. natural-, social- and interdisciplinary sciences), and the geographic region the researcher is based in. First, we find an age cohort effect that points to greater use of English by younger scholars (see Fig. 2). Researchers over 65 display the least propensity to use English, with an average estimate of only 51.3% of their journal submissions in English. In contrast, scholars aged 44 and below report submitting 10 percentage points more of their articles in English. This difference is also apparent in the percentage of scholars who report publishing exclusively in English. Specifically, scholars who report doing so make up 16.9 and 19.2 of the under 35 and 35-44 age groups, respectively, and only 8.6, 10.1 and 6.9% of the 45-54, 55-65, and over 65 groups, respectively.

Para. 5 These age differences can possibly be explained by two factors. First, it may be that as English has become more widespread as an international language, younger scholars are more comfortable writing in English, and therefore more likely to submit articles in English. Second, it could be due to older scholars tending to be at a point in their careers where they face fewer pressures related to hiring and tenure; without these outside pressures, researchers may feel more at ease to publish in their local language, even if it means reaching a smaller audience.

Lesson 2

Reading

Para. 6 The next two factors we test — the perceived reputation of publishing in English and the perceived institutional pressure to do so (see Table 1) — are often cited in the literature as important ‘push’ factors of external pressures [e.g. tenure requirements that favour English publications (Lee and Lee 2013)] and ‘pull’ factors of personal desire for a wider audience (Uzuner 2008). In particular, we find that the pull factor that publishing in English increases the reputation of one’s work bears some salience. In fact, those who agree with the statement that publishing in English increases the reputation of their work submit 63% of their articles in English. In contrast, researchers who do not agree with this statement only author roughly 50% of their submissions in English. While this gap is large, even those agreeing that publishing in English increases the reputation of their work still author a large amount (over 35%) of their submitted articles in other languages, indicating that other factors pushing (or pulling) them to publish in these languages are strong enough to sometimes outweigh the reputation that comes with English. In contrast, the push factor, perceived institutional pressure to publish in English, seems to play less of a role. In fact, the gap in the percentage of self-reported journal submissions in English is only 5 percentage points between those who report feeling institutional pressure and those who do not.

Lesson 2

Reading

Para. 7 Fourth, when it comes to the place of employment, our bivariate results indicate that scholars who are employed by universities estimate that, on average, they write approximately 8 percentage points more of their submitted articles in English than those working for think-tanks, research centres, and in other non-university environments (see Table 1). Similarly, social scientists estimate to submit approximately 9 percentage points fewer articles in English than scholars in the natural sciences. While the disciplinary differences are similar to those observed by other studies (Giannoni 2008; Gingras 1984), the general dominance of English is less pronounced than had been found or assumed in previous studies (see, for example: Benfield and Howard 2000, p. 643; Giannoni p. 99); even in the natural sciences where English is most dominant, the average researcher submits almost a third of their articles in a language other than English.

Para. 8 Finally, there are some minor regional variations across the world in the prevalence of English, with Europeans reporting higher average percentages of submissions in English than their counterparts in the Americas and Asia (see Table 1). Europeans also reported greater rates of working exclusively in English (16.4%) than do those in the Americas (6.6%) or Asia (11.4%). This trend lends some limited support to critical voices in the literature, who express concern that participating in English-dominated scientific discourse places a greater burden on those in developing nations (Canagarajah 1996; Curry and Lillis 2004).

Lesson 2

Reading

Para. 9 In the multivariate analysis (see Table 2) we regress the self-reported percentage of journal submissions in English on our six independent variables. To do so, we use dummy variables. For the two original nominal variables age, region, and type of sciences, we create one less dummy variable than we have categories, with the hard sciences, Asia, and young researchers serving as the reference category, respectively.

Para. 10 Our model confirms that the belief in the higher reputation of English is the strongest determinant in favor of publishing in English. Specifically, we find that the model predicts a respondent agreeing that publishing in English will increase their works reputation will report on average 10.1 percentage points more journal submissions in English than somebody who disagrees. In contrast, the corresponding ‘push’ factor of perceived institutional pressure, which was already quite weak in the bivariate realm, is not statistically significantly related to the self-reported percentage of journal submissions that are in English.

Lesson 2

Reading

Para. 11 The multivariate model further confirms the influence of a researcher's area of study and work environment. For example, the model predicts that individuals employed by a university have an approximately 6 percentage points higher chance to submit their research in English compared to those scholars who work in the private sector, a research center or a think tank. Similarly, the model predicts that those who study the natural sciences submit approximately 8 percentage points more journal articles in English than researchers in the social sciences, and 6 percentage points more than researchers in the interdisciplinary sciences. Both of these differences may be reflective of a difference between those scholars who wish to engage a local or global audience (see: Gingras 1984). Natural science fields and university settings are becoming increasingly globalized; in order to reach the most possible fellow academics in the field scholars face pressure to publish their work in the most-used language. In contrast, those employed in non-academic settings might be more likely to be trying to engage local policy-makers or audiences; hence their somewhat higher tendency to publish in the local language. In a similar vein, several social science sub-disciplines are centred on a particular country or cultural community (e.g. Quebec Studies), and as such scholars are likely to share a common language other than English within this subfield. Finally, Table 2 confirms that researchers aged 65 and over have a statistically significantly lower likelihood to write in English than younger scholars: our model predicts that, on average, they write about 12 percentage points fewer of their journal submissions in English compared to researchers under 35. Similarly for region, only European scholars seem more likely than those in the Americas to write in English, with the regression equation predicting that they submit nearly 10 percentage points more journal articles in English.

Lesson 2

Reading

Para. 12 To sum up, our article suggests that English is the dominant language of scientific communication. Yet, its dominance is not complete; rather, non-native speakers still submit almost 40% of their articles in a language other than English. Of course, there is some variation in this percentage. A researcher's propensity to submit journal articles in English increases with youth, university employment and research in the natural sciences, as well as the personal belief in the higher reputation of English publications. As our study only addresses motivations to publish in English, future research into motivations for publishing in other languages would be very useful in creating a more fulsome understanding of the determinates of publication language. For the future, we expect to see a continued increase in English publications. In particular, the greater use of English by younger scholars and possible increases to the prestige incentive may increase its dominance over time. This applies even more so, considering that there is a push to embrace English's dominance (see: Lublin 2018). In the present, however, while English is clearly the most-used language of scientific communication, publications in other languages remain commonplace.

Acknowledgments We thank Springer Nature for allowing us to use their survey on language choice in academic publications for this short article.

Lesson 2

Review — Taking notes

A fundamental reason for **taking notes** is to enhance your comprehension and retention of the content of a text. The ability to put another's ideas and explanations into your own words as a summary and / or paraphrase, or to transform a written text into a flow chart or mind map, demonstrates whether you have understood the material you have been reading.

Lesson 2 Review — Taking notes

Put the note-taking techniques you have learned so far into practice to check on your understanding of Text B.

① Nevertheless, there is no one correct way to take notes.

Lesson 2 Critical Thinking

Read the text again and answer the following questions.

1. To your understanding, is English a dominant language in all disciplines? And justify your claim.

Yes. It is more so in regard to natural sciences. Most renowned journals only accept submissions in English.

2. Are there any disadvantages or drawbacks if English prevails the academic world?

Yes. It might limit the non-native speakers of English to produce or consume academic literature. It may also further restrict the participation of scholars from less developed regions or countries. Moreover, Western social network and cultural norms will be more deeply privileged.

3. What are some of the motives for non-native speakers to rush to publish their research findings in English?

Firstly, to gain the prestige and international recognition. Secondly, to meet the requirement for funding or promotion. Thirdly, a personal desire to reach a wider audience.

Lesson 2

Micro-skills (Review)

I. Hedging

II. Reporting verbs

III. Identifying features of a conclusion

Lesson 2

Hedging

In academic language it is very common to avoid making statements that are too direct or too confident. This is because in academic world some of the ideas discussed are not facts that we are sure about. We can avoid directness by using special words and expressions which indicate that something may be true, is partially true, is true in some cases. This is known as **hedging**.

Lesson 2

Hedging

Read Para. 5 again carefully and place the hedging devices in it into different categories.

Means	Hedges
Modal verbs	e.g. can, may, might,
Adjectives	could e.g. partial, likely ...
Adverbs	e.g. typically, almost, relatively ...
Verbs	e.g. seem, indicate, appear ...
Nouns	e.g. tendency, possibility ...
Clauses	e.g. it is estimated that ...
Inserts and other expressions	e.g. in most cases, to some extent ...

Lesson 2

Hedging

Read Para. 5 again carefully and place the hedging devices in it into different categories.

Means	Hedges
Modal verbs	can, may (be), could be
Adjectives	likely, fewer
Adverbs	possibly
Verbs	tend to
Nouns	
Clauses	
Inserts and other expressions	

Lesson 2

Reporting verbs

A **reporting verb** is often used when we refer to the work of other writers in academic text.

e.g.

*Diamond (2002) **points out** that only a small number of plant and animal species have been exploited for food.*

Reporting verbs have one of the three general functions. They indicate what other writers:

1. **did** in their research (e.g. **study, measure, use**)
2. **found** in their research (e.g. **find, observe, show**)
3. **thought** or **said** in their writing (e.g. **think, believe, write, state**)

Lesson 2

Reporting verbs

A. Find the reporting verbs in Paragraph 6. Write the verbs in the appropriate groups (1-3).

1. cite
2. find, indicate
3. report

Lesson 2

Reporting verbs

B. In pairs, add the reporting verbs in the box to the groups (1-3).

argue

carry out

claim

consider

demonstrate

discover

establish

examine

explore

investigate

note

point out

prove

show

suggest

Lesson 2

Reporting verbs

B. In pairs, add the reporting verbs in the box to the groups (1-3) in the previous exercise.

argue	carry out	claim	consider	demonstrate
discover	establish	examine	explore	investigate
note	point out	prove	show	suggest

1. carry out, examine, explore, investigate
2. demonstrate, discover, establish, note, prove, show, suggest
3. argue, claim, consider, note, point out, suggest

① The word “**note**” in Group 2 formally means to notice sth.; the word “**note**” in Group 3 formally means to mention sth.

① The word “**suggest**” in Group 2 formally means to indicate sth.; the word “**suggest**” in Group 3 formally means to put sth. forward.

Lesson 2

Identifying features of a conclusion

Read the Conclusion of Text B and identify each feature (a-e) the conclusion contains.

- a. restatement
- b. summary
- c. limitation(s)
- d. suggestion(s)
- e. implication(s)

Lesson 2

Identifying features of a conclusion

To sum up, our article suggests that English is the dominant language of scientific communication. Yet, its dominance is not complete; rather, non-native speakers still submit almost 40% of their articles in a language other than English. Of course, there is some variation in this percentage. A researcher's propensity to submit journal articles in English increases with youth, university employment and research in the natural sciences, as well as the personal belief in the higher reputation of English publications. As our study only addresses motivations to publish in English, future research into motivations for publishing in other languages would be very useful in creating a more fulsome understanding of the determinates of publication language. For the future, we expect to see a continued increase in English publications. In particular, the greater use of English by younger scholars and possible increases to the prestige incentive may increase its dominance over time. This applies even more so, considering that there is a push to embrace English's dominance (see: Lublin 2018). In the present, however, while English is clearly the most-used language of scientific communication, publications in other languages remain commonplace.

Lesson 2

Identifying features of a conclusion

To sum up, our article suggests that English is the dominant language of scientific communication. Yet, its dominance is not complete; rather, non-native speakers still submit almost 40% of their articles in a language other than English. Of course, there is some variation in this percentage. Lesson 2

Macro-skills

Revising and editing

Lesson 2

Revising and editing

When writing essays and other academic texts, it is important to use an appropriate **style**. This will be different from the style of the language you hear and use in spoken **academic contexts**, such as lectures, seminars and tutorials.

Lesson 2

Revising and editing

A. Look at the following writing task.

Some people think that a sense of competition in children should be encouraged. Others believe that children who are taught to co-operate rather than compete become more useful adults.

Discuss both these views and give your own opinion.

Lesson 2

Revising and editing

- a Avoid colloquial words and phrases (i.e. ones used in informal conversation rather than formal writing). _____
- b Avoid long expressions where there are shorter ones with the same meaning. _____
- c Use a one-word verb rather than a multi-word verb where possible. _____
- d Unless you are referring specifically to men or to women, use gender-neutral language. _____
- e Avoid referring to the reader as 'you' or 'the reader'. _____
- f Avoid contracted forms (e.g. use 'is not' rather than 'isn't'). _____
- g Don't use 'like' instead of 'such as' when giving examples. _____
- h Don't use 'besides' to add another stronger reason. _____
- i Avoid using questions to organise your writing. _____
- j Avoid using 'I' (think/believe etc.) when you express your opinion. _____
- k Use nominalisations where possible to express yourself more efficiently. _____
- l Don't use exclamation marks to show your surprise. _____
- m Use more appropriate negative forms ('few' rather than 'not many', 'little' rather than 'not much', 'no' rather than 'not any'). _____

① Please note that these are general guidelines rather than strict "rules" by which a writer must always abide by. Adhering to some simple guidelines as such, however, can help students improve their writing.

Lesson 2

Revising and editing

1 At this moment in time, people have different views about whether 2 we should teach children to be competitive or co-operative. While 3 to compete can sometimes be 4 pretty useful in life, I believe that the ability to co-operate is more important.

On the one hand, competition can be a great source of motivation for 5 boys. When teachers use games or prizes to 6 bring in an element of competitiveness into lessons, it can encourage children to work harder to outdo the other pupils in the class. 7 Well, this kind of healthy rivalry may help to build children's self-confidence, while pushing them to work independently and progress more quickly. When these children 8 go out of school, qualities 9 like confidence and determination will help 10 him in competitive situations such as job interviews. 11 I think that competition should be encouraged in order to prepare children for adult life.

Lesson 2

Revising and editing

12 Besides, it is perhaps even more important to prepare children for 13 quite a lot of aspects of adult life that require co-operation. In the workplace, 14 they're expected to work in teams, follow instructions given by their superiors, or supervise and support the more junior members of staff. 15 What qualities are needed? Team collaboration skills are much more useful than a competitive determination to win. This is the attitude that I believe schools should foster in young people 16 ! 17 We shouldn't promote the idea that people are either winners or losers. Teachers could show children that they gain more from working together. 18 Not many people can deny the 19 big impact cooperation has on 20 you.

In conclusion, I can understand why people might want to encourage competitiveness in children, but it seems to me that a co-operative attitude is much more desirable in adult life.

7. Omitted or deleted.
8. leave
9. such as
10. them

Lesson 2

Revising and editing

Answers for reference:

11. It can therefore be argued that
12. On the other hand
13. A number of / Numerous
14. adults are
15. Omitted or deleted.
16. Change the exclamation mark (!) into a period or full stop (.)
17. Instead of promoting
18. Few
19. enormous / significant / substantial / major / tremendous
20. the youth / them

Lesson 2

Revising and editing

- C.** Draft a piece of academic writing on the topic *AI: Bless or Curse?*. Make sure you include ALL the key sections discussed in the previous units. You may refer to Text B as a sample if necessary.
- D.** Using what you have learnt in this section, find ways to improve the style in your writing.
- E.** Exchange your writing with a partner, and fill out the Peer Review Form handed out.

Lesson 2

Revising and editing

Peer Conference Form

The Peer Reviewer's Name: _____

The Author's Name: _____

Title of the piece: _____

I. Introduction

Does it include any attention getter? What is it? Is it effective? Concise? Interesting?

Does it include a thesis statement? Copy it here. Is it appropriate? If no, how to improve?

II. Body

What are the body paragraphs about? Do they meet the objectives in the thesis statement?

Do the body paragraphs stay focused on the thesis statement? Is there any stray information?

Are the claims in each body paragraph well supported? How are they supported? Are the supporting materials well interpreted?

Does it include any graphs? Is it relevant to the main topic? Is it well discussed?

III. Conclusion

Is there a conclusion? Does it review the important points?

Is the author rephrasing the main points instead of using the similar words and expressions in the previous paragraphs?

What other elements does the author include in the conclusion?

IV. APA conventions

How many in-text citations can you find? What forms are they in, integral or non-integral?

As for the references, how many items can you find for this part?

Does the reference list follow exactly the format required by APA style?

Thanks for Watching!
